

The General Syndicate of Scientific Professions was established in the mid-fifties after desperate attempts that failed, especially for the small number of graduates of the Faculty of Science at the time. Events continued until the Syndicate's branch was established in Alexandria in the mid-sixties as the largest branch at the level of 22 branches across the republic aimed at serving the graduates of the Faculty of Science - Alexandria University.

The Syndicate of Scientific Professions seeks to:

Activate scientific research.

Spreading scientific culture among scientists.

Presenting a pioneering model in developing the scientific and practical environment.

Qualifying scientists for the labor market through accredited training programs.

Strengthening the relationship between graduates of the College of Science and their union by raising mutual trust.

Participation in the work that serves all scientists.

Contribute to the study of productivity problems and propose solutions to them.

Presenting a pioneering model in developing the scientific and practical environment.

The community participation of scientists and the provision of all activities that serve the members and their families.

Work to raise the moral, technical, health and material level of the union members.
